Pulse Opinion Research, LLC is an independent public opinion research firm using automated polling methodology and procedures licensed from Rasmussen Reports, LLC. The population targets were based upon census bureau data, a series of screening questions to determine likely voters, and other factors. Pulse Opinion Research determines its partisan weighting targets through a dynamic weighting system that takes into account voting history, national trends, and recent polling. The survey was conducted using an established automated polling methodology. For 90%, sample calls were placed to randomly-selected phone numbers through a process that insures appropriate geographic representation. 10% of the sample was conducted via online surveys of those individuals who use a cell-phone as their primary telephone. After the calls and on-line surveys are completed, the raw data is processed through a weighting program to insure that the sample reflects the overall population in terms of age, race, gender, political party, and other factors. The processing step is required because different segments of the population answer the phone in different ways.
