

## Connection to Nature

### Americans love our open spaces.

- Living near green space can [add up to 2.5 years](#) to an American's life.<sup>1</sup>
- Three out of every four Americans feel an "emotional or spiritual uplift" from spending time in natural areas<sup>2</sup>.
- 85 percent of Americans say it is important to be able to access them.<sup>3</sup>

### However, open space is being lost to other land uses at an alarming rate.

- Each day in America, an estimated 2,000 acres (3.3 square miles) of open space is developed, mostly near the urbanized areas where most Americans live, and mostly due to an increased number of people living in those areas.<sup>4</sup>
- The Census Bureau projects the U.S. population will add 75 million people by the Year 2060, with roughly 90 percent of that growth resulting from immigration.<sup>5</sup>

As our population grows, parks and beaches simply cannot keep pace with the demand, and access to America's open spaces - whether majestic or modest, where people can find solitude, enjoy peace-of-mind, and observe nature in action - will become increasingly [restricted](#).
